DEPALLETIZING

SUPER SORTER SEMI-AUTOMATIC EMPTY CAN DEPALLETIZER

Video

Video

Our Goldco Super Sorters are an absolute necessity for can manufacturers who prioritize visual inspection. These remarkable machines expertly depalletize and single-file empty cans into sorting lanes, allowing for meticulous manual inspection before moving on to be re-palletized or transferred to other conveyance systems within the client's operation.

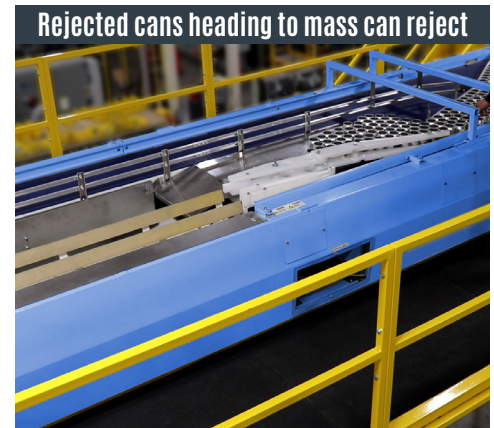

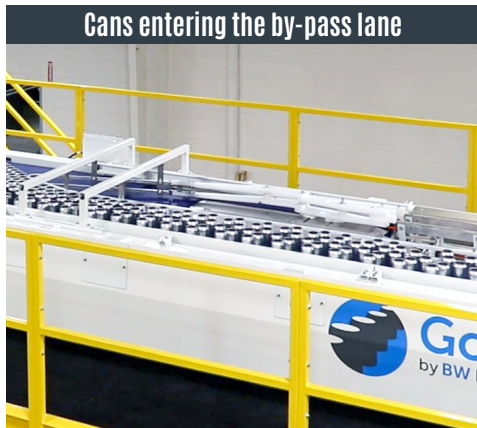

Goldco Super Sorter Semi-Automatic Empty Can Depalletizer

OPERATION

Cans are depalletized and single-filed into two lanes, tilted away, and conveyed past an operator. The operator inspects and removes any can that does not meet their quality standards. Cans that pass inspection are transferred onto a cross conveyor that feeds onto a palletizer accumulator or other conveyance.

FEATURES

- Robust 4-chain electric hoist with automatic layer height indexing
- Automatic pallet change feature with full-width pallet stop door
- Powered can sweep for depalletizing
- Layer pad grippers to hold layer pad in place while cans are being depalletized
- Scrap can hopper and chute
- R 6A Automatic Empty Pallet Stacker
- Empty pallet discharge conveyor
- Layer pad rack for convenience
- All electric/pneumatic operation with push-button controls

Accumulating Table	Inspection Lanes	Pallet Infeed Conveyor	Controls
