CASE PACKING

DL 25 TOP LOAD CASE PACKER

Video

Video

Nigrelli's DL 25 Direct Loader Case Packers are specifically designed to specifically to load flexible products into a horizontal case pattern, making them the perfect choice for Individually Quick Frozen (IQF) products among others. Our infeed conveyors offer the flexibility to space the bags individually or utilize the optional shingling mechanism for creating perfectly organized and nested groups of bags for each case layer.

Nigrelli DL 25 Top Load Case Packer

DESCRIPTION

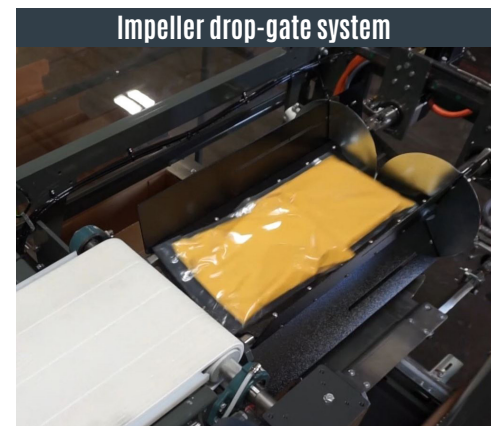

As each layer is built on the impellers, they rotate and gently place the bags directly into the case or onto the lower product catchers/case flap openers. For maximum case capacity, the optional case vibration feature ensures that the bags are perfectly settled. Layout flexibility is designed into the DL 25 Direct Loader as cases can be brought in from any direction and exit in any direction. Integration with new or existing case formers and sealers is accomplished with simple connecting conveyors. Wash-down construction options allow for installation within the processing area.

FEATURES

- Up to 240 bags per minute
- Easy changeover
- Minimal air requirement, electro-mechanical operation
- Touchscreen control
- Flexible pack patterns
- Small footprint
- Servo-driven, patented, rotary impeller system
