

Case Conveyor (LR Series)

BW Integrated Systems' LR Series Case Conveyor is based upon the successes of our pack conveyor style design and control philosophies. The LR Series product line utilizes a low back-pressure approach that is capable of transporting or accumulating cases.

Case Conveyor (LR Series)

Durable non-marking rollers convey cases when needed and reduce package friction during accumulation. This allows the product to remain in-line, eliminating the need for overly complex mechanical accumulation solutions.

Available Options

- Stainless steel
- Pneumatically actuated side rails
- "Infinitely adjustable" side guides
- Brake/meters
- Incline conveyors
- Decline conveyors
- Leg or ceiling supported
- Live "straddle" transfers
- Lift-out shafts
- UHMW, stainless steel or beaded roller rails

Contact our experienced sales teams today for a comprehensive review of your application(s) and to see how our LR Series Case Conveyors can benefit your company.

Live "straddle" transfers (optional)

Features

- Low maintenance accumulation style case conveyor
