

GOLDCO SUPER SORTER

Semi-Automatic Empty Can Depalletizer

Video 

Goldco Super Sorters are a must for any can manufacturer that visually inspects their cans. Our Super Sorters depalletize and single-file empty cans into sorting lanes for manual inspection before advancing on to be re-palletized or to other conveyance in the client's process.

Goldco Super Sorter Semi-Automatic Empty Can Depalletizer

Operation

Cans are depalletized and single-filed into two lanes, tilted away, and conveyed past an operator. The operator removes any can that does not meet quality standards. Accepted cans continue and are transferred onto a cross conveyor that feeds onto a palletizer accumulator or other conveyance.

Contact our experienced sales teams today for a comprehensive review of your application(s) and to see how our Goldco Super Sorter Semi-Automatic Empty Can Depalletizers can benefit your company.
