

ROBOTIC PALLETIZERS

Specialty

BW Integrated Systems' Robotic Specialty Palletizer solutions are capable of handling and palletizing an array of products and sizes.

We offer decades of experience in material handling, coupled with proven robotics technologies and capabilities. Our product offerings feature compact designs to save valuable floor space, handle multiple products in a single cell, utilize electro-servo driven technology, require less maintenance, and are designed to outlast conventional equipment.

Robotic Specialty Palletizers

Examples of products that can be run on our Robotic Specialty Palletizers are bags, drums, pails, scrap bales, paper products, specialty trays, and more.

Our technology is being applied in the following industries: Paper, Household Chemical, Industrial Manufacturing, Food, and others.

Customized layout to accommodate client's available floorspace. End-of-arm tool designed to handle client's products. Different levels of automation available - from very basic, floor-level palletizers to highly-complex systems with multiple robots and conveyors that interface with upstream and downstream equipment.
